Lighting up
>>the Internet
lu2000

Lucent is lighting up a new kind of Internet. The new Internet will be broadband, a high-speed network of glass and light that will open the door to the rich applications of tomorrow and allow people the world over to communicate without limit.

The new Internet will be mobile, letting users on the go tap the power of the World Wide Web from 'Net phones and other wireless devices. E-business, e-entertainment and e-education will be enriched and will enrich their users.

We're also building a new Lucent, a revitalized company intent on seizing the vast opportunities of the emerging e-world.

In the following pages, you'll learn how Lucent is a global powerhouse in the technologies that will underpin the next-generation Internet. Our triple play of optical, data and wireless networking—with the software and the services to support them—will help bring to life the new networks and services that will change people's lives.
