Plug'n'Play installation

No networking knowledge required

Symphony Cordless Ethernet Bridge

*Simple, Reliable Home and Small Office
Computer Networking Without Wires*

No Wires Needed—Network Computers Cordlessly

Connect your computers together without wires! Eliminate the hassle of opening up walls, climbing through your attic or

stringing cables across the floor.

With the Symphony Cordless Networking Suite you can network your desktop and laptop

computers together, no matter where they are in your home or office. With a 50-meter range, Symphony covers most homes and small offices. And, because it is cordless, you can place your computers wherever you need them—not tied to a phone jack.

Save Money, Save Time— Share One Internet Connection Simultaneously

You've probably experienced the conflict of multiple people trying to get on the Internet at the same time—you need to check a competitor's web site, and your coworker needs to research vendors that can print your brochures. End these Internet access frustrations with Symphony. The included Symphony Conductor™ application lets multiple people share one ISP account through an ISDN router, cable modem, or DSL modem connection. You and

your coworkers can explore different websites at the same time for the cost of only one ISP connection.

Extend a Wired LAN

With Symphony, adding wireless clients to your existing Ethernet network is as simple as plugging the Ethernet Bridge into a standard Ethernet hub using the included cable. Now, any laptop or desktop enabled with a Symphony Cordless adapter can access shared files, use network printers, and take advantage of the network's Internet access. And no technicians are necessary to help get it operating!

No Networking Knowledge Required

Symphony Composer™ installation wizard takes the entire hassle out of setting up your cordless network. From start to finish Symphony Composer guides you through the installation—setting up Internet sharing, printer sharing and file sharing for you. And, adding additional computers is easy too.

Features

- | | |
|--|---|
| • Simultaneous multi-user Internet sharing | Only one ISP account needed |
| • No wiring between computers and Bridge | Access the Bridge anywhere in the office, home or patio |
| • Works with existing LANs | Add wireless PCs to existing network as needed |

Members of the Symphony Cordless Family

With Symphony Cordless

Networking products, your office can start enjoying fast, shared Internet connections, saving money by sharing printers, and end floppy transfers—without wires! Using only one phone line and one ISP account,

Symphony lets you explore different Internet sites from multiple computers at the same time. Access printers, drives, folders, and files from any computer on your cordless network. Share your existing modem or attach the Symphony Cordless Ethernet Bridge to an existing Ethernet network or a high-speed Internet access device like an ISDN router, xDSL modem, or Cable modem for a very flexible home and small office solution.

Cordless PCI Card

For desktop PCs with an available PCI slot.

Cordless PC Card

For laptop computer users with a PC Card Type II slot.
