Wireless Access PCI Adapter

Key Benefits

Multiple users can share Internet access, files, and printers. Plug a Wireless Access PC Card into each PC you want to connect, install the software, and start sharing.

News travels fast. Information travels between PCs at 11 Mbps – that's 11 million bits per second. For comparison, traditional wired networks in many offices use 10 Mbps connections.

No strings attached. Enjoy the benefits of networking without drilling through walls or tripping over cables. Easy to install and use!

802.11b standard-based. U.S. Robotics Wireless Access products are standards-based, so they work reliably together and with other 802.11b-compliant products.

If you've ever fought over the phone line for your turn on the Internet, or inconveniently had to run cables throughout your home or office, you're going to love wireless networking!

With wireless networking, all the computers in your home or small office can simultaneously share one Internet connection, printer, data files, even music and multi-player games. It's easy to set up – just plug a U.S. Robotics Wireless Access Network Card into each computer you want to connect, install the software, and start sharing. Best of all, it uses wireless technology, so there are no cables to connect, no wires to trip on, no holes to drill.

Wireless technology uses radio waves, similar to an FM radio or cordless telephone, to send and receive information at speeds up to 11 Mbps. While the technology works best with computers close together in open areas,

you can network computers up to 91 m apart in any direction – even on different floors of your house.¹

The U.S. Robotics Wireless Access PCI Adapter can be used in any personal computer with an available PCI 2.1 slot. Additionally, the Wireless Access PCI Adapter has a removable Wireless Access PC Card that you can remove to use in a laptop computer. Up to three computers with Wireless Access PC Cards can share resources “peer to peer” – that means no Wireless Access Point or other network equipment is needed for fast, wireless networking.

The U.S. Robotics Wireless Access solution is adaptable and future-friendly. If you have more than three computers to network, or your needs increase in the future, you can add a U.S. Robotics Wireless Access Point and more network cards to expand your growing network.
