The U.S. Robotics® 56K Performance Pro Modem brings home and small business users the superior performance of controller-based online communication. This means that the basic processing functions are built into the modem itself, rather than relying on the computer's processor and software, leading to faster throughput. It also means that users aren't limited to Windows-based applications. This modem supports DOS and Linux as well as Windows, so it will work with a wide range of business applications and games.

And speaking of games, you can switch the Performance Pro Modem into game mode any time you're ready for some online competition. Enhanced performance settings give you quicker response times. And when it's time to go back to the real world, just turn the game mode off — the modem automatically returns to its normal configuration.

Advanced line probing technology finds the "potholes" in your V.90 connection. It tells your provider's equipment how to avoid the conditions that cause slowdowns and dropped calls. So the latest weather maps, live audio broadcasts, even streaming video come to you at the highest speed possible on your line.

Even first-time modem users will find the Performance Pro Modem simple to install. All the necessary modem software loads itself from the multimedia installation assistant on the Installation CD included in the package. A live-action video demonstrates, then shows each step of the hardware installation procedure.

The *Connections™* CD, also included, is packed with fax and Internet access software, complete with sample programs for work, home, and entertainment.
