The Internet, the telephone, the fax machine – today's home and office present a steady stream of incoming information. U.S. Robotics rises to the challenge of the Information Age with a modem designed especially for managing a variety of calls. The U.S. Robotics 56K Message Modem combines the best features of telephone, modem and fax, to become a single solution for all of your communication needs.

In the office, the U.S. Robotics 56K Message Modem acts as a full-duplex speakerphone, so you can enjoy natural-sounding, hands-free conversation (you'll need to add external speakers if your PC does not have them). Software included with the modem enables voice mail and fax functionality — even fax broadcasting and fax on demand! And above all, it's a U.S. Robotics 56K modem, with V.90 standard and U.S. Robotics' advanced line probing technology for the fastest possible analogue data connection.

When you're away from your PC, the Message Modem is an even more valuable business partner. It stores up to 20 minutes of incoming voice mail messages, up to 50 pages of incoming fax transmissions, or a combination of both, **with your PC switched off**. You can retrieve your voice mail from any touch-tone telephone, and forward received faxes to a pre-specified location, again, all whilst your PC is switched off.

A U.S. Robotics 56K Message Modem is a sound investment. Integrated Flash Memory enables trouble-free upgrades to future enhancements and technologies, simply by downloading software from the U.S. Robotics Web Site.
