Cost-Effective ISP Connections

Over 100 million people use the Internet to conduct business, purchase services and to access e-mail, news and information. In fact, it is now estimated that traffic on the 'Net is doubling every 100 days! The growth and development of the Internet continues to challenge Internet Service Providers (ISP's). Every day they are faced with a critical need to connect more clients, more quickly, with greater reliability. In addition, the explosion of the Internet as a medium for electronic commerce promises to bring even more expansion in the coming years. This means that the typical consumer will put increasing demands on their ISP, demands

that must be met if the ISP is to remain profitable.

Digi provides ISPs with the tools they need to construct a reliable, cost-effective solution that is easily maintained and expanded. Whether you are using X.25, Frame Relay, ISDN, or analog lines, Digi has the products to help you build your remote-access system today and to lay the groundwork for tomorrow's inevitable need to expand. One more thing you can count on is Digi's industry-leading technical support. Although you may never need to use it, our support team will be there if you do.

- Expand customer base
- Provide top transmission rates for FTP, telnet and e-mail
- Additional servers translate to additional revenue
