

Retail Automation

SOLUTION
PROFILE

Service Station/Convenience Store Automation

Today's fast-paced world requires that retail operations provide efficient service in a minimal amount of time. Every day millions of commuters throng to service stations and convenience stores to quickly fill their gas tanks and get back on the road. In order to eliminate the need for customers to stand in line to pay for gasoline, service stations are now implementing a "pay at the pump" system which allows customers to fill up and pay with a credit card without ever entering the store.

Digi provides these retail operations with the products needed to build a reliable, cost-effective solution that seamlessly integrates into their existing computer

network. Using a combination of Digi's ClassicBoard to connect the store's cash registers and peripherals, the AccelePort Xr to provide connections to multiple pumps, and the SYNC/570 for remote access to headquarters, a convenience store can provide speedy service to time-starved customers, increase the store's customer traffic, as well as easily monitor inventory and sales figures. Networking products from Digi create the infrastructure needed for a time-saving, economical solution for customer-oriented retail operations. And with Digi's world-class technical support, you can be assured that your system will stay up and running as long as your customers are.

- Customer convenience
- Increased traffic flow
- Easy inventory monitoring

Digi ClassicBoard	4, 8 or 16 asynchronous ports Up to 460.8 Kbps
Digi AccelePort Xr	4 or 8 asynchronous ports Up to 921.6 Kbps
Digi SYNC/570	2 or 4 synchronous ports Line rates up to 5 Mbps
