## Digi Computerized Automated Teller Banking System

In recent years, worldwide use of automated teller machines (ATMs) has skyrocketed. Today over 25 billion people regularly use ATMs to make deposits and to access funds. That adds up to over one billion transactions every month! To ensure that customers have the reliable ATM access they demand, it only makes sense to partner with a specialist in designing flexible, expandable communication solutions: Digi International.

With Digi's AccelePort asynchronous communications adapters, you can link a central bank location to multiple remote

ATMs with exceptional ease. Once installed, the Digi adapter provides the link to convenient 24-hour banking and allows bank employees to instantly retrieve transaction information from each ATM site. Whether you need to connect 20 ATMs or thousands, Digi has the products you need to make the right connection. A Digi AccelePort board installed inside an ATM will provide customers with an easy connection to the central bank. In addition, Digi's expert technical support will keep your Automated Teller Machine network up and running for a lifetime.

- Convenient personal bank transactions
- Easy system installation
- Highly reliable connections

Digi ClassicBoard	4, 8 or 16 asynchronous ports Up to 460.8 Kbps
Digi AccelePort Xr	4 or 8 asynchronous ports Up to 921.6 Kbps
