URGENT: READ THIS FOR COMPATIBILITY INFORMATION

The rows in the following table show which versions of Dynamic C and the RFU are compatible with which versions of the RabbitLink firmware.

Compatibility Between Dynamic C and the RabbitLink Firmware

RabbitLink Firmware	Dynamic C	Rabbit Field Utility
Version 1.00	Versions 7.03 through 7.06	Version 2.0
Version 2.00	Versions 7.20 and later	Version 2.20 and later

The firmware version of currently shipping RabbitLinks is 2.00. RabbitLinks that shipped prior to March 1, 2002 are version 1.00. The firmware version number is the same as the version number of the onboard serial console, so to determine the version number of a RabbitLink you can view the console's startup message.

Dynamic C Premier customers may obtain a free upgrade of Dynamic C version 7.20 at `www.zworld.com/support/downloads.html`. The latest RFU version is included in the upgrade. For further information about the RabbitLink, refer to the *RabbitLink User's Manual*.
